## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-17 are allowed.

### ***Reasons for Allowance***

2. With respect to Claim 1, an actuator for controlling a substantially radial movement of a lens in response to an actuator control signal; a means for generating the actuator control signal; a means for supplying the actuator control signal to the actuator; and a means for determining an amplitude variation characteristic of the actuator control signal, the amplitude variation characteristic being indicative of a variation of the actuator control signal with time are all known in the prior art.

However, nothing in the prior art showed or suggested the specific limitation of a means for determining an activation time for a position change actuator signal component in response to the amplitude variation characteristic. Also, nothing in the prior art showed or suggested the specific limitation of a means for including the position change actuator signal component in the actuator control signal in response to the activation time.

## **EXAMINER'S AMENDMENT**
